## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group I (claims 1-2) in the reply filed on 11/10/2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Specification***

#### ***Title***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Abstract***

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The

abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Drawings***

4. The drawings are objected to because there is no difference between figure 1 and figure 2 (the specification on page 9 (paragraphs 45-46) also contains error in indicating that both figure 1 and 2 figure 2 is a block diagram showing the structure of the main part of the receiving device according to the first embodiment of the invention). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet"

pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. **Claim 1** is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada et al. (hereinafter "Yamada"; U.S. Patent Number 6,980,585).

Regarding **claim 1**, Yamada discloses a receiving device (figures 1-2, column 4 line 31 to column 5 line 61) for carrying out an interpolating synchronous detection (column 6 line 66 to column 7 line 21) when receiving a code division multiple signal (CDMA column 1 lines 13-38), comprising:

storage means for storing receive data which are an object to be detected synchronously (figure 2, memory 32, column 6 line 53 to column 7 line 16) and control means for switching a storage of the receive data to be detected synchronously in the storage means (figure 2, control/selector 50). Yamada does not explicitly disclose that the data are the object to be detected synchronously in the storage means before or after a reverse diffusion (note that The Examiner interprets the term "reverse diffusion" which is commonly known as the "de-spreading" in the CDMA system (see column 1

lines 7-11). However, since the claim specifies the term: "before or after" a reverse diffusion, it would be obvious that if the de-spreading signals is stored, it does not matter if it is before or after the reversed diffusion.

### ***Allowable Subject Matter***

7. **Claim 2** is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding **claim 2**, the applied references fail to disclose or render obvious the claimed limitations of the receiving device according to claim 1, wherein the control means changes a storage order for the receive data based on symbol rate information obtained when demodulating the receive data.
